Product description

The Testo 816-1 Sound Level Meter is your reliable tool for noise measurement, compliant with IEC 61672-1 Class 2 and ANSI S1.4 Type 2 standards. Unlike the basic Testo 816 model, it includes a data logger for up to 31,000 measurements and PC software. Packaged in a carrying case, it's ideal for industries like occupational safety and environmental impact assessment.

With customizable measurement options, you can choose between Slow or Fast modes and two frequency-weighting curves. Field calibration is possible, and the data is easily readable on the backlit display. USB connectivity and included software make data management and analysis simple.

Perfect for ensuring noise levels are within safe limits in workplaces and public spaces. Complete package includes carrying case, PC software, USB cable, calibration screwdriver, batteries, and user manual.
