

Novo 4S-ST flue gas analyzer

0237

Services

After sale services

Ordinary and extraordinary maintenance, installation, staff training, spare parts, calibration and calibration for measuring instruments.

Product description

With its PRO mode, Novo makes combustion analysis intuitive and visual: simply select the fuel and device, observe the parameters on the chart, and ensure they're in the green zone for optimal combustion. Results can be printed or emailed.

The device boasts a large 7" screen, facilitating navigation. Its innovative probe has a single connector for various functions, allowing for quick setup. The wide backlit window of the condensate trap displays the water level, which can be easily emptied.

With Novo, you can simultaneously monitor combustion measurements and gas valve pressure, eliminating the need for a separate pressure gauge. Additionally, thanks to its unique sensor, there's no more dilemma of choosing between high range or low range: it automatically adjusts to the detected gas concentration.
