

Falco Pumped - Fixed VOC detector

0038

Servicies

After sale servicies

Ordinary and extraordinary maintenance, installation, staff training, spare parts, calibration and calibration for measuring instruments.

Product description

This product is no longer in production, as it has been replaced by the Falco 2 and Falco 2 TAC products. For more information contact us at info@comastridistribution.com.

FALCO is an advanced volatile organic compounds (VOC) detector capable of continuous monitoring. With its pump system, it can oversee remote and hard-to-access areas. Its Typhoon and Fence Electrode technologies shield the sensor from humidity and condensation, ensuring reliability even in extreme conditions.

It provides precise measurements, reduces false readings, and saves time and money. Featuring an intrinsic safety sensor, FALCO can be maintained in hazardous zones. It offers standard outputs like RS485 and alarm configurations. Its features include resistance to weather conditions, various measurement ranges, and a display visible up to 20 meters. The kit includes the detector, a magnetic actuator, and a calibration adapter.
